

TechStep Sweden 2026

IT-companies from Moldova and Ukraine

A partnership to support the IT-sector in Ukraine and Moldova

Open Trade Gate Sweden in close collaboration with IT Ukraine, the Entrepreneurship and Export Promotion Office of Ukraine, Invest Moldova Agency, and Moldova Innovation and Technology Park support the continued development and internationalisation of two dynamic and fast-growing IT ecosystems. Through the TechStep Sweden programme, innovative IT companies from Ukraine and Moldova are prepared for and connected with the Swedish market.

In 2026 this partnership will bring a carefully selected group of tech companies to Sweden, from promising start-ups to established scale-ups. What unites them is strong technical expertise, an innovation-driven mindset, and proven experience in delivering digital solutions for international clients.

TechStep Sweden 2026

TechStep Sweden 2026 introduces fourteen companies to the Swedish market:

- eight Ukrainian companies within healthtech, fintech and gaming
- six Moldovan companies within healthtech and gaming.

Companies from Ukraine and Moldova offer advanced digital solutions that respond to concrete needs and growing demand in Sweden. All participating companies have experience working with international markets, including the EU, the US and the UK.

TechStep Sweden is a 15-month market entry programme combining market knowledge, business development support and direct engagement with Swedish stakeholders. The goal is to create long-term commercial partnerships and sustainable market presence for the participating companies.

Almexoft Ukraine

Almexoft

Almexoft is a no-code workflow automation and document management platform that helps organisations digitise and streamline document-driven business processes across areas such as procurement, HR, contracts, and internal services.

By enabling business users to design and adapt workflows without coding, Almexoft reduces dependency on IT resources and accelerates process automation. The platform supports end-to-end automation and flexible system integration, and has been deployed in more than 70 large-scale implementations across multiple industries.

Almexoft enables faster approvals, improved transparency, and centralised control over core business processes for large organisations.

Doctor Eleks

Doctor Eleks is a smart, highly customizable, and scalable software designed for healthcare organisations. It effectively combines the medical and administrative aspects of medical practice.

The system simplifies scheduling, patient registration and medical documentation. It supports patient logistics within the hospital and improves communication and sharing of results. The system also helps staff create reports and manage personnel, finances and inventory. In addition, it integrates with medical equipment.

Doctor Eleks is the all-in-one solution for meeting all the clinic's needs.

Djooky

MELODEX

Djooky's product Melodex is a European AI-driven platform for music discovery and talent development, enabling data-driven identification of emerging artists at scale. Using advanced machine learning trained on proprietary behavioural data from over 200,000 users across 191 countries, Melodex predicts artistic potential before commercial release and connects talent with professional production, promotion, and funding.

The platform has demonstrated measurable impact through internationally successful artists and strong audience reach. Djooky is widely recognised, having been featured in leading global media and awarded the EU Seal of Excellence (2025), Luxembourg Venture Days Winner (2025), and SelectUSA FinTech Pitch.

InDevLab

InDevLab is an international IT company specialising in secure, sustainable, and regulation-compliant digital healthcare solutions. The company develops and implements medical information systems, telemedicine platforms, secure IT infrastructures, and AI tools for clinics, laboratories, and healthtech startups in Europe and the US, providing full-cycle services from architecture and development to cybersecurity and compliance with GDPR, NIS2, and ISO 27001.

Three of our success cases: AI and automation tools that reduced patient care time by five times; medical analysis management systems that reduced patient care time by three times; telemedicine and audio/video communication systems that reduce operating costs for IT services per patient to 2.5-7 euros per year.

Infinity Technologies

Infinity Technologies is a global R&D-as-a-Service provider specialising in healthcare, helping organisations turn complex data into measurable outcomes.

Since 2003, the company has delivered AI-driven analytics and end-to-end digital solutions for hospitals, healthtech companies, medical device firms, insurers, and public institutions. Its expertise covers national eHealth platforms, clinical systems, medical imaging, IoMT, and secure, regulation-compliant software, including large-scale digital health platforms used by millions.

By combining deep healthcare domain knowledge with reusable AI accelerators, Infinity Technologies enables faster time-to-market while ensuring scalability, security, and real clinical impact.

Knopka

KNOPKA is a Ukrainian healthtech company providing a digital coordination system for hospital medical staff. The platform enables real-time communication and task coordination across emergency departments and inpatient wards, helping hospitals manage patient flow and critical situations more efficiently.

The solution is used in 22 hospitals in Ukraine as part of daily clinical operations, supporting coordination of on-call doctors, multidisciplinary teams, and emergency responses. Delivered as a subscription service, KNOPKA can be deployed without complex IT integration and is now expanding to the EU market to meet growing demand for efficient hospital staff coordination.

Progalit

PROGALIT
programmatic litholysis

Progalit is a healthtech company offering an AI-driven software platform that automates the outpatient treatment and prevention of urolithiasis.

The solution uses patient data to create personalised treatment plans, support medication adherence, and enable real-time health monitoring for both patients and clinicians. The platform allows doctors to remotely monitor patients and access detailed analytics, while patients receive guidance, reminders, and educational support.

Progalit has demonstrated measurable impact, including a 30% increase in doctors' efficiency, high patient satisfaction (8 out of 10), and around 20% reductions in healthcare costs, relapses, and hospitalisations, benefiting patients, providers, and insurers alike.

Thundermark

Thundermark develops mobile and serious games for healthcare and training. Its core product, LifesaverSIM, is a mobile, game-based simulation platform for first aid and emergency trauma care that turns complex medical protocols into engaging, scalable training for first responders. The platform addresses rapid skill decay and the high cost and complexity of traditional training through smartphone deployment (BYOD, offline), interactive simulations, and objective skill measurement.

With over 130,000 registered users, LifesaverSIM is widely used by training centres and government institutions in Ukraine and by more than 30 educational institutions for prehospital care education. Its international potential is demonstrated through adoption by the Estonian Defence League and a forthcoming pilot with Karolinska Institute.

Barimetriq

Barimetriq addresses fragmentation in long-term obesity and metabolic care across pharmacotherapy, bariatric surgery, and lifestyle interventions. The platform provides longitudinal clinical decision support that connects care pathways, enables structured monitoring, and supports safer follow-up and continuity of care, while integrating seamlessly into existing clinical workflows.

Designed as clinician-centred infrastructure rather than a consumer-only app, Barimetriq prioritises patient safety, evidence-aligned decision support, and long-term outcomes over short-term engagement metrics.

CGI Lab Games

CGI LAB GAMES supports Swedish game studios with game production, publishing, and international market entry. The company provides development expertise, cost-efficient production, and cross-platform delivery, helping studios bring concepts to market faster and adapt titles for global audiences. It also supports console publishing, quality assurance, and distribution across major gaming ecosystems, enabling smoother launches beyond the domestic market.

With an experimental approach to game development, CGI LAB GAMES explores and launches new genres while efficiently adapting projects for platforms such as Nintendo Switch and PlayStation. The company combines platform expertise with scalable production to bring games to market efficiently and expand its global footprint.

Cindi Software

Cindi helps companies reduce sick leave and health-related administrative burden by giving employees a simple, user-friendly app to organise medical information such as test results and healthcare documents. By structuring health data and guiding users on next steps and follow-ups, Cindi enables faster access to care, more efficient recovery, and smoother handling of employee health cases.

This reduces prolonged absence and eases pressure on HR functions, while offering an employee-centred approach to health management. Cindi has shown strong early traction, onboarding more than 1,600 users in under two months without marketing, demonstrating clear demand for a simpler and more effective solution.

Eatingai LTD

EatingAi.

EATINGAI helps Swedish companies improve employee wellbeing by making healthy eating easier, more engaging, and sustainable. Traditional wellness programmes often struggle with low participation and high drop-off due to friction and lack of motivation; EATINGAI addresses this through voice-first food logging, AI-driven behavioural nudges, and gamified habit-building that support healthier daily choices. By lowering effort and increasing engagement, the platform helps reduce burnout and strengthen long-term wellbeing at work.

EATINGAI is proud to have built a product that people genuinely enjoy using every day, transforming nutrition from a source of guilt and effort into a positive, sustainable habit through AI, voice interaction, and playful design.

Selftalk

Mental health challenges are the leading cause of sickness absence in Sweden, yet support often falls short: only around 22% of Nordic employees feel they receive sufficient mental wellbeing support, and many never seek help. Managers are expected to support employees but frequently lack the tools and guidance to do so. Selftalk addresses this gap with stigma-free, self-guided mental wellbeing support that helps employees regulate stress, stay engaged, and prevent burnout at an early stage.

The platform offers safe, AI-driven therapy supported by a global network of over 40 psychologists and is trusted by UiPath, a global unicorn with 3,800 employees. By lowering barriers to support, Selftalk enables scalable and preventive mental wellbeing solutions in the workplace.
